What is Auto Spot Mod?

Auto Spot is a very useful mod designed specially for Battlefield games. You know that you can help your team in BF by spotting an enemy that will show on your teammates' radar. You might earn extra points once spotted enemy is defeated. This action is accomplished by manually pressing the Right Bumper on Xbox One console. With activated Auto Spot you no longer have to press Right Bumper as the mod will automatically do it for you every time you scope your weapon. Your enemies will be spotted once you pull Left Trigger to aim as this helps to prevent the BF4 anti-cheater filter from blocking your mod.

How Do I Operate Auto Spot Mod?

To activate:

- *Hold down Mod Switch on the back*
- *Hold down Right Bumper and then tap D-pad UP button. A special LED will glow **YELLOW** to let you know Auto Spot has been activated. Scope your weapon like normal and the controller will spot enemies for you.*

To turn OFF:

- *Hold down mod switch on the back*
- *Hold down Right Bumper and then tap D-pad UP button. A special LED (2, 3 or 4) will turn OFF indicating that special feature has been turned OFF.*

You can turn OFF all special modes (2,3 and 4 LED's) at any time by holding down mod switch on the back and tapping A button. All 2,3 and 4 LED's will turn off indicating that all special features have been turned OFF.

What Games Is Auto Spot Mod Compatible With?

Auto Spot Mode is compatible with Battlefield and Gears of War games.
