What Is Dual Trigger Rapid Fire?

This mod was specially designed for “secondary weapon” in Call Of Duty games such as “one shot” hand guns and semi-auto pistols.

How Does Dual Trigger Rapid Fire Work?

When holding dual wielding semi-auto pistols (for example P99 in MW3), a user pulls both triggers and gets Rapid Fire on both guns. Dual trigger Rapid Fire will not usually make Machine Pistols (Fully Automatic Pistols) shoot any faster, though.

How Do I Operate Dual Trigger Rapid Fire?

To turn Dual Trigger Rapid Fire ON, press and hold mod switch on the back of the controller, then tap Aim Button (L1 Button in default button layout). The Player 4 LED will twinkle, and then stay ON to let a user know that Dual Trigger Rapid Fire is ready to use.

To toggle Dual trigger Rapid Fire OFF, hold the mod switch on the back of the controller and tap the D-pad down. Player 4 LED will twinkle and then turn off.

What Games Is Dual Trigger Rapid Fire Mod Compatible With?

Dual Rapid Fire Mode is compatible with all Call of Duty games.
