What Is Auto-Spot Mod?

In Battlefield and Gears of War games, a user can help out his team by "spotting" an enemy. Once an enemy is spotted, he will show up on your teammate's radar and you may even get extra points when that enemy is vanquished. In Battlefield, this is accomplished by manually pressing "BACK" or "SELECT" button when you are in a vehicle. In Gears of War 3, this is accomplished by pressing the left stick (in the default button layout).

How Does Auto-Spot Mod Work?

Once Auto Spot mode has been activated on your controller, you no longer have to manually press "BACK" or "SELECT" buttons. Enemies will be automatically spotted (as the controller will automatically press the spotting button for you) when you pull the Left Trigger.

How Do I Operate Auto-Spot Mod?

To turn on Auto Spotting:

- Hold the mod switch and then tap the back button.
- One of the open LED's will glow to let you know Auto Spot has been activated.
- Scope your weapon like normal and the controller will spot enemies for you.

To change auto spot to a different sub mode:

- Hold the mod switch, hold the back button, and then count the number of times the LED blinks

Two different modes are available:

- Mode 1: Auto spot only when gun is aiming.
- Mode 2: Auto spot all the time.

To turn off Auto Spotting:

- Hold the mod switch and then tap the back button.

You can always **turn all exclusive mods OFF (Player 3 and 4 LED's)** by holding down mode switch on the back and tapping A Button.

What Games Is Auto Spot Mod Compatible With?

Auto Spot Mode is compatible with Battlefield and Gears of War games.
